

Junior QA Engineer

Full time

Location: Zagreb Office (Vurovčice ul. 21)

We are looking for a Junior QA Engineer to join our team!

As a QA Engineer, you will plan, design, review and execute test specifications for new enhancements and bug fixes for the GIS Cloud web and mobile apps.

In this role, the Quality Assurance Engineer works closely with multiple agile teams. The tester has the aptitude to adapt their existing testing experience and apply relevant test methods and techniques to support a continuous development lifecycle. You will be juggling conflicting priorities, so the ability to understand requirements is essential. While being a team member, you should also be able to work independently.

Our ideal candidate is detail-oriented, analytical, a reliable team player, has a keen sense of quality and a structured approach to work.

Sounds like you? Drop us a message!

Your responsibilities:

- Organize and write test cases
- Manual testing
- Maintain and monitor bug lists
- Work with developers to reproduce and resolve defects and execute re-tests and regression testing
- Collaborate with members of the Support Team to resolve technical customer issues
- Participate in the design process to understand, analyze and influence the application/service/system to be tested
- Review requirements, specifications, and technical design to provide feedback

Key requirements:

- Good eye for detail
- Critical thinking, problem-solving skills and willingness to learn
- High level of motivation, ability to multitask
- Effective communication skills within the team, you are open to feedback and willing to share yours
- Analytical, organizational, and planning skills
- Fluent in written and spoken English

We'll consider this a plus:

- Experience with GIS tools
- Experience/familiarity with software testing - test case design, test case execution
- Experience with testing both web and mobile software applications

You will benefit from:

- A team of experts in their field that you can learn a lot from (and they from you!)
- A motivating and enjoyable work environment for developing innovative technology that sets industry standards worldwide
- Working on a unique product (web & mobile), a platform that is continuously being perfected
- Continuous salary increases depending on individual performance
- Interesting and challenging tasks
- Working on individual and team projects
- Awesome homey office in Zagreb with free lunch and limitless coffee provided
- Flexible working hours and the possibility to work remotely
- A game room when you need a break
- Minimum of 25 vacation days (for when you *really* need a break)
- Multisport membership

About us:

GIS Cloud is a SaaS company from Zagreb, developing and offering its own product - a collaborative mapping platform, used in more than 50 countries and by more than 150 000 users around the globe, including the USA, Australia, Denmark, Oman, Nigeria, Brazil to Japan, and more.

Our web and mobile mapping applications allow users to collect data, edit and analyze it, as well as share maps and data with colleagues and the public. As a cloud-based Geographic Information System, GIS Cloud was the first on the market back in late 2009, enabling organizations of all sizes to organize their work and information around maps, to be faster, more efficient and paper-free.

Some of our client stories include NGOs bringing clean water for residents in remote areas, organizations managing water or electricity networks and road infrastructure in cities, mapping Maori burial sites in New Zealand, and much more.

Adventurer Davor Rostuhar became the first Croat to conquer the South Pole on foot, and you could have followed his expedition on a map created in GIS Cloud.
