An important socialization process for children is the development of "persuasion knowledge," which is the ability to detect that advertisers "try to make you buy things" (Robertson and Rossiter 1974). Understanding the onset and extent of persuasion knowledge has been a topic of importance for decades. A child's understanding of persuasion attempts is important from a basic social science perspective because it represents a large field of social understanding. Persuasion knowledge is also essential to the development of healthy skepticism of and resistance to advertising. From a public policy perspective, children's ability to understand persuasion is key in understanding their vulnerability and, thus, any needed protection (Ringold 2005) or educational intervention (Eagle 2007). It should also be central to the development of industry self-regulation (Armstrong and Brucks 1988). Indeed, the Children's Advertising Review Unit (2009) specifically invoked considerations of "unfairness" in advertising directed at children (under age 12) in its most recent self-regulatory guidelines. The goal of the current research is to understand how children develop persuasion knowledge by considering their individual social development.

Znanstveni stil Publika za koju se piše

Homogena

Heterogena

Znanstveni stil

‘Najčešća i najlakše ispravljiva pogreška autora je da prepostave da njihova publika zna više.’

Leslie Sage
Senior Editor, *Nature*

‘Izbjegavajte žargon, objasnite nejasne pojmove i kratice. Imajte na umu da mnogi čitatelji nisu stručnjaci u Vašem području.’

“Instructions to Authors”
Science

Kako do šire publike?

1. Koristite konkretnе primjere,
2. Dajte kratka objašnjenja i definicije,
3. Koristite jednostavan umjesto stručnog jezika (žargona)

Primjeri:

OBJAŠNJENJA

In aquatic habitats of karst regions (carbonate based geological substrate) a phenomenon of calcite deposition may occur. In temperate zones and non-thermal (flowing) waters the deposit that forms is called tufa. It is a porous calcium carbonate deposit that develops in carbonate-supersaturated waters (Chafetz and Folk, 1984), where calcite crystals are deposited on immersed objects including organisms such as algae and mosses and animal-originating structures

KONKRETNI PRIMJER

Furthermore, some quarries utilize water in the exploitation process and are situated near natural water supplies that could be affected. Diabase (used for asphalt mixture) quarries are a typical example.

IZBJEGAVANJE ŽARGONA

An accurate understanding of the spatial relationships between the structures of the head is essential for anthropological methods concerned with the comparison of faces to skulls (superimposition) or the prediction of faces from them (facial approximation).

Loš je članak lako napisati, i uglavnom, loš članak će biti **dulji** od dobroga. Da biste napisali dobar članak morate pažljivo odabratи što želite postići: koju VAŽNU PORUKU želite da čitatelji dobiju Vašim člankom. Kad to riješite, lakše je USREDOTOČENO pisati.
